

NORTHERN NECK ELECTRIC COOPERATIVE
Warsaw, VA

POWER COST ADJUSTMENT RIDER
SCHEDULE PCA-2

I. AVAILABILITY

Available in all territory served by the Cooperative, subject to the Terms and Conditions of the Cooperative on file with the Virginia State Corporation Commission.

II. APPLICABILITY

When referenced therein, this schedule is applicable to and becomes a part of each electric rate schedule.

III. DESCRIPTION

The Cooperative shall apply a uniform per kWh charge or credit to applicable sales in accordance with the following terms. All definitions and calculations shall be in reference to the total Cooperative system but shall exclude any kWh sales, kWh purchases, Energy Supply Service revenues, and power costs related to service to any customer under an electric service tariff that separately provides for a direct pass through of purchased power expense.

IV. DEFINITIONS

PCA = Power cost adjustment factor.

ESS Revenue = Revenue produced by the base Energy Supply Service part of each tariff.

ESS Base = \$0.08286 per kWh sold reflecting the annual system average base ESS Revenue per kWh sold.

kWhs = The total projected kWh to be purchased in the applicable rate year times the Loss Factor.

PCp = The projected total cost of purchased power for the applicable rate year from all sources, including costs associated with the Energy Adjustment part of the ODEC Tariff, that will be charged to Account 555.

O = Any Over Recovery balance recorded on the Cooperative's balance sheet as of the most recent accounting month available.

DEFINITIONS (*continued*)

U	=	Any Under Recovery balance recorded on the Cooperative's balance sheet as of the most recent accounting month available.
EA	=	ODEC's Energy Adjustment rate from time to time, expressed in \$ per kWh.
ODEC kWh Factor	=	The going level ratio of annual ODEC kWh purchased to total annual kWh purchased based on historical or projected data.
Loss Factor	=	One minus the estimated kWh loss percentage based on historical data.

V. FORMULA

In any month there is a change in: a) the ODEC base rates, b) a change in the SEPA Capacity rate or capacity allocation that would materially affect the overall cost of power per kWh, or c) a purchase power price or volume change pursuant to a non-ODEC/non-SEPA power supply contract that would materially affect the overall cost of power per kWh, for application in each month thereafter until changed in accordance with this tariff, a PCA will be computed as follows:

$$PCA = \frac{PCp - O + U}{kWhs} - \text{ESS Base} + \text{EAr}$$

Where:

EAr will be zero unless there is a change in the EA relative to the EA used for PCp in which case EAr will be calculated as follows and the PCA will be modified to reflect the new EAr:

$$EAr = (\text{New EA} - \text{EA included in PCp}) \times \text{ODEC kWh Factor} \times \text{Loss Factor}$$

VI. OVER AND UNDER RECOVERY AMOUNT

The over or under recovery of power cost will be calculated and booked monthly based on the difference between actual purchased power costs in the month (including any charge or credit for an ODEC margin stabilization adjustment net of any amount applicable to calendar 2017 power cost to the extent said amount is booked to account 555 in 2017) and revenues booked in the month equal to the base ESS Revenues; plus, the PCA revenues. Booked revenues and kWh sales will be net of any applicable unbilled adjustments. (Over) and Under Recovery Amounts, if any, will be credited or debited to accounts 253.60 Deferred Credit – PCA or 186.00 Deferred Debit – PCA, with corresponding credits or debits to 555.01 Purchased Power - PCA.

VII. MODIFICATIONS TO THE PCA

The intent of the PCA is to recover the Cooperative's purchased power cost on a dollar for dollar basis. At any time, the Cooperative may re-calculate the PCA to minimize (over) or under recovery of power cost if actual data and more current information for the remainder of the applicable rate year indicate that the PCp, kWhs, or both have changed enough to warrant a change in the PCA, or if the (Over) or Under Recovery Amounts become excessive. At a minimum, the PCA will be recalculated once in any twelve-month period to adjust for any accumulated Over or Under Recovery Amount.

VIII. RATE YEAR

The rate year is the twelve-month period beginning with the month in which a change in the PCA will occur that is not solely due to a change in EAR.
